NBS COLLABORATIVE REFERENCE PROGRAMS

TAPPI Paper and Board (6 times per year)

Bursting strength	Smoothness
Tearing strength	Surface pick strength
Tensile breaking strength	K & N ink absorption
Elongation to break	Moisture content
Tensile energy absorption	Opacity
Folding endurance	Blue reflectance (brightness)
Stiffness	Specular gloss, 75°
Air resistance	Thickness
Grammage	Concora (flat crush)
	Ring crush

FKBG-API Containerboard (48 times per year)

Mullen burst of linerboard
Concora test of medium

MCCA Color and Appearance (4 times per year)

Gloss at 60°
Color and color difference

CTS Rubber (4 times per year)

Tensile strength, ultimate elongation and tensile stress
Hardness
Mooney viscosity
Vulcanization properties

ASTM Cement (2 times per year)

Chemical (11 chemical components)
Physical (15 characteristics)

AASHTO Bituminous

Asphalt cement (2 times per year)
Cutbacks (once a year)

INTRODUCTION

Reports 63S and 63G comprise the third set of reports for the 79-80 program year. Participants in tests which involve strength properties of paper will receive only the S report; those in tests which measure other properties will receive only the G report.

Notes and comments to individual laboratories and "Best Values" applicable to a particular method are given following Table 1 for each method. See page 1 of this report for an explanation of "Best Values". Please do not confuse these Best Values with provisional values included with the samples to detect serious discrepancies at the time of test.

If there are any questions on the notes, the analyses, or the reports in general, contact Robert G. Powell or Jeffrey Horlick on 301/921-2946.

Jeffrey Horlick, Administrator
NBS-TAPPI Collaborative Reference Program
Office of Testing Laboratory Evaluation Technology

TAPPI-NBS COLLABORATIVE REFERENCE PROGRAM

BACKGROUND AND PURPOSE

In 1969, the National Bureau of Standards and the Technical Association of the Pulp and Paper Industry established a collaborative reference program to provide a participating laboratory with a means to check periodically the level and uniformity of its testing in comparison with that of other laboratories.

The interchange of paper and board products and of the raw materials for these products requires agreement among raw material suppliers, paper and board producers, converters, distributors, retailers, commercial testing laboratories, user organizations and the ultimate consumer as to the meaning of test results, an agreement that cannot be achieved without accurate and precise testing. This program is designed to help assure agreement.

HOW THE PROGRAM WORKS

Participants Select the Tests in which they wish to participate. This choice is made on joining the program, but additional tests may be added at any time. Also new participants may enter the program at any time.

Test Samples are Distributed Bimonthly; i.e. every 2 months.

Provisional Values are Provided with the Samples for one or both of the test levels, depending on method. The provisional values permit serious discrepancies to be detected without delay. (It is left to the discretion of the laboratory supervisor as to whether these values should be known to the operator.)

Each Participant Tests the Samples, following instructions provided for each test method. The full check on a single instrument should normally take no more than 30 minutes. The test results are then sent to NBS for analysis. The participant is also asked to report other information relevant to an accurate analysis, such as test conditions and the instruments used.

Industry Means, Best Values and Other Statistics are developed from the data by NBS. The best values are estimates based on a careful examination of all data, both current and past, with special attention to results obtained by the National Bureau of Standards and other recognized reference laboratories in this and other countries.

A Quick Report is Prepared for each participating laboratory reporting data on time. This report shows the industry mean values, and the deviations of the laboratory's results from these values for each test method.

A Longer Summary Report, Showing the Data from all Participants, is also prepared. In the summary report, of which this report is an example, each laboratory is identified by a code number so that the information is maintained on a confidential basis. However, instruments are identified by type so participants can compare their results with those obtained on similar instruments of different manufacture. This report includes test averages, best values and standard deviations for individual participants and for the group as a whole. A participant should be able to readily determine the level and variability of his results in comparison with those of the other laboratories.

Repeatability and Reproducibility Statements such as Contained in ASTM, TAPPI and ISO Standards are included at the end of the report. Participants can check their performance level against the precision statement given in the test method or specification.

TABLE OF CONTENTS

Analyses In This Report

PAGE	

i	Introduction
ii	Description of Program
iv	Metric Conversion Table
1	Key to Tables and Graphs
3	40-1 Air Resistance, Gurley Oil type
6	40-2 Air Resistance, Sheffield type
9	41-1 Air Resistance, Gurley Mercury type
11	44-1 Smoothness, Parker Printsurf
12	45-1 Smoothness, Sheffield type
17	45-2 Smoothness, Bekk type
19	47-1 Smoothness, Bendtsen type
21	53-1 Moisture
23	56-1 K & N Ink Absorption
25	60-1 Opacity, White (89%) Backing, Fine papers
30	60-2 Opacity, Paper Backing, Elrepho type, Fine papers
32	61-1 Opacity, White (89%) Backing, News Paper
35	65-1 Blue Reflectance (Brightness), Directional
38	65-2 Blue Reflectance, Diffuse, Elrepho (Gloss Trap)
40	65-3 Blue Reflectance, Diffuse, Elrepho (No Gloss Trap)
42	75-1 Specular Gloss, 75 degree, High Range
45	76-1 Specular Gloss, 75 degree, Low range
47	90-1 Thickness (Caliper)
52	95-1 Grammage (Basis Weight)
55	Summary

Analyses In The S Report

10-1	Bursting Strength - Up to 45 psi
10-2	Bursting Strength - Up to 45 psi, Air Clamps
11-1	Bursting Strength - Up to 100 psi
15-1	Tearing Strength - Printing Papers
16-1	Tearing Strength - Packaging Papers
19-1	Tensile Breaking Strength - Packaging Papers
20-1	Tensile Breaking Strength - Printing Papers, CRE
20-2	Tensile Breaking Strength - Printing Papers, Pendulum
25-1	Tensile Energy Absorption - Packaging Papers
26-1	Tensile Energy Absorption - Printing Papers
28-1	Elongation to Break - Packaging Papers
29-1	Elongation to Break - Printing Papers
30-1	Folding Endurance, MIT type
30-2	Folding Endurance, MIT type, log (base 10)
35-1	Stiffness, Gurley
36-1	Stiffness, Taber
49-1	Surface Pick Strength, IGT
50-1	Surface Pick Strength, Wax
91-1	Concora (Flat Crush)
96-1	Ring Crush

TABLE OF CONVERSION FACTORS TO METRIC (SI) UNITS

<u>Physical Quantity</u>	<u>To Convert From</u>	<u>To</u>	<u>Multiply by</u>
Bursting strength	psi	kPa	6.895
	kg/cm ²	kPa	98.07

	in.-lb/in. ²	J/m ²	175.1
Bending stiffness	kg-m/m ²	J/m ²	9.807
	g·cm	μN·m	98.07
	lb	N	4.448
Flat-crush strength (Concora)	lb	N	4.448
	lb/6.00 in.	kN/m	0.0292
Thickness	mil	μm	25.40

KEY TO TABLES AND GRAPHS

MEAN -	The average of individual TEST DETERMINATIONS. The number of TEST DETERMINATIONS in the mean is given in the upper right corner of the first table (TEST D.) and again at the bottom of this table.																											
GRAND MEAN - (GR. MEAN)	The average of the individual laboratory MEANS, excluding laboratories flagged (see column F) with an X, #, or *. The GRAND MEAN is given in US customary units and, where applicable, in SI metric units.																											
SD OF MEANS - (SD MEANS)	The standard deviation of the laboratory MEANS about the GRAND MEAN; an index of the among-laboratory precision.																											
DEV -	The deviation or difference of the laboratory MEAN from the GRAND MEAN.																											
N. DEV -	The normal deviate or ratio of the DEV to the SD OF MEANS; an indication of the degree of divergence of the laboratory MEAN from the GRAND MEAN. A N. DEV of more than 2 or less than -2 may indicate that the participant is not following the procedure considered standard for this analysis.																											
SDR -	The standard deviation of repeated measurements; that is, of individual test determinations about their MEAN.																											
AVERAGE SDR -	The average of the individual laboratory SDR's; an index of the within-laboratory precision of repeated measurements.																											
R. SDR -	The relative standard deviation of repeated measurements; that is, the ratio of the SDR to the AVERAGE SDR; an indication of the ability of a participant to repeat his or her measurements relative to the average ability. The greater the number of TEST DETERMINATIONS the closer the R. SDR should be to unity. If R. SDR is outside the limits given below, the participant may not be following the procedure considered standard for this analysis:																											
	<table border="0"> <thead> <tr> <th>No. of test Determinations</th> <th>Lower limit for R. SDR</th> <th>Upper limit for R. SDR</th> </tr> </thead> <tbody> <tr><td>3</td><td>0.09</td><td>2.58</td></tr> <tr><td>4</td><td>0.12</td><td>2.25</td></tr> <tr><td>5</td><td>0.26</td><td>2.06</td></tr> <tr><td>8</td><td>0.40</td><td>1.77</td></tr> <tr><td>10</td><td>0.46</td><td>1.67</td></tr> <tr><td>15</td><td>0.56</td><td>1.53</td></tr> <tr><td>20</td><td>0.61</td><td>1.45</td></tr> <tr><td>25</td><td>0.65</td><td>1.39</td></tr> </tbody> </table>	No. of test Determinations	Lower limit for R. SDR	Upper limit for R. SDR	3	0.09	2.58	4	0.12	2.25	5	0.26	2.06	8	0.40	1.77	10	0.46	1.67	15	0.56	1.53	20	0.61	1.45	25	0.65	1.39
No. of test Determinations	Lower limit for R. SDR	Upper limit for R. SDR																										
3	0.09	2.58																										
4	0.12	2.25																										
5	0.26	2.06																										
8	0.40	1.77																										
10	0.46	1.67																										
15	0.56	1.53																										
20	0.61	1.45																										
25	0.65	1.39																										
VAR -	Code for instrument type or variation in condition, see second table.																											
F -	Flag, with following meaning:																											
o -	Included in grand mean and inside 95% error ellipse.																											
*	Included in grand means but plotted point falls outside of the 95% error ellipse. The participant should take this as a warning to reexamine his or her testing procedure.																											
X -	Excluded because plotted point would fall outside of the 99% error ellipse, (see page 2 for explanation of Graph).																											
# -	Excluded because data were not understood or because of a non-coded variation reported by the laboratory. (See the notes following Table 1 for each method).																											
* -	Excluded from grand means because VAR was non-standard for the analysis.																											
M -	Excluded because data for one sample are missing.																											
S -	Included in grand mean but only after omission of one or more 'wild' values; that is test determinations more than 3 times AVERAGE SDR from the laboratory's MEAN. Not more than 20% of the test determination may be excluded in this manner without rejecting the laboratory.																											
Best values -	Given at the end of Table 1 for each method for which sufficient information is available. These best values are estimates based on a careful examination of all data, both current and past, with special attention to results obtained by the National Bureau of Standards and other recognized reference laboratories in this and other countries. All participants using equipment that is standard for the analysis should be able to achieve results within the plus-minus (+/-) limits, when these are shown along with the best values.																											
COORDINATES -	Distances along major and minor axes of error ellipse. If special additive or concurrent model of the measuring process applies to this method, the distance along the minor axis represents the random error within a laboratory while that along the major axis also includes a systematic laboratory component of error.																											
95% ELLIPSE -	Lengths of the major and minor axes of the ellipse and the angle that the major axis makes with the horizontal axis.																											
AVG R. SDR -	Average of the R. SDR for the two samples; an indication of the laboratory's precision of repeated measurements.																											

Graph -

For each laboratory the MEAN for the second sample is plotted against the MEAN for the first sample, with each point representing a laboratory. The horizontal and vertical lines are the GRAND MEANS. The dashed line is drawn at 45 degrees. The solid sloping line, which may or may not lie close to the 45 degree line, is along the major axis of the error ellipse. The ellipse is drawn so that, on the average, it will include 95% of the points representing the laboratories.

Plotted symbols are as explained above (under F), except that an 'S' is plotted as an 'd'. A participant whose plotted point falls outside of the ellipse should carefully reexamine the testing procedure he or she is following.

The graph is plotted with an ellipse when there are 20 or more laboratories in the analysis. When there are 10 through 19 laboratories in the analysis, the graph is plotted but the ellipse is omitted. When there are fewer than 10 laboratories retained in the analysis, the graph is not plotted.

The International System of Units (SI) is used on the plots wherever possible to aid participants in familiarizing themselves with SI. Grand means in SI units are given at the top of the plot, and supplementary scales in SI units are drawn along the axes allowing the reader to compare means and variability in common units and SI units for the same data.

SUMMARY -
(At end of report)

In addition to several quantities already defined above, the summary shows the following values for each test method:

REPL CRP -

The number of replicate test determinations used in this Collaborative Reference Program.

REPL TAPPI -

The number of replicate test determinations in a test result required by the applicable TAPPI Official Test Method or assumed here if there is no TAPPI Official Test Method. This quantity is needed in the computation of TAPPI repeatability and reproducibility from the SD OF MEANS and the AVERAGE SDR. See TAPPI Official Test Method T1206 for definitions and computations.

PEPEAT -

TAPPI repeatability; a measure of the within-laboratory precision of a test result.

REPROD -

TAPPI reproducibility; a measure of the between-laboratory precision of a test result.

Best values: E37 770 ± 90 Seconds per 10cc,
B73 1280 ± 470 mercury density,
(direct reading)

The values reported here are the time in seconds required for the displacement of 10 ml of air through an area of 1.0 sq. in. of the specimen. The values are not converted to 100ml of air nor to oil density.

15. ABSTRACT (A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.) Collaborative Reference Programs provide participating laboratories with the means for checking periodically the level and uniformity of their testing in comparison with that of other participating laboratories. An important by-product of the programs is the provision of realistic pictures of the state of the testing art. This is one of the periodic reports showing averages for each participant, within and between laboratory variability, and other information for participants and standards committees.				
16. KEY WORDS (six to twelve entries; alphabetical order; capitalize only the first letter of the first key word unless a proper name; separated by semicolons) Collaborative reference program; Laboratory evaluation; Paper; Precision; Reference samples; Testing calibration
